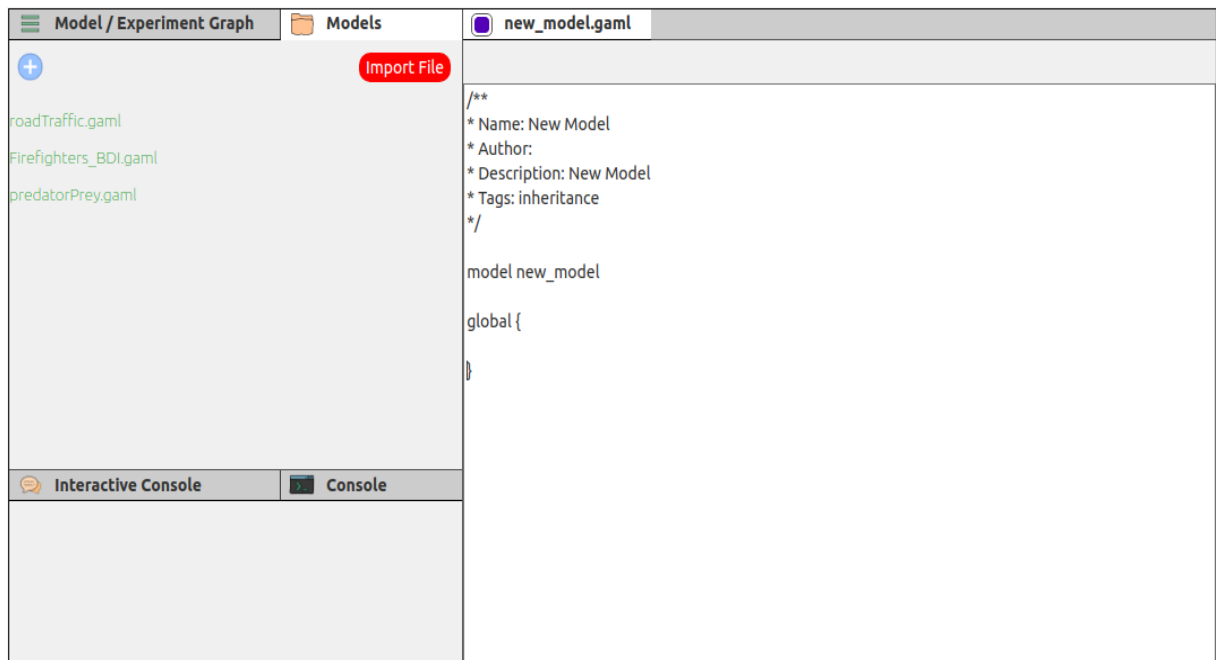

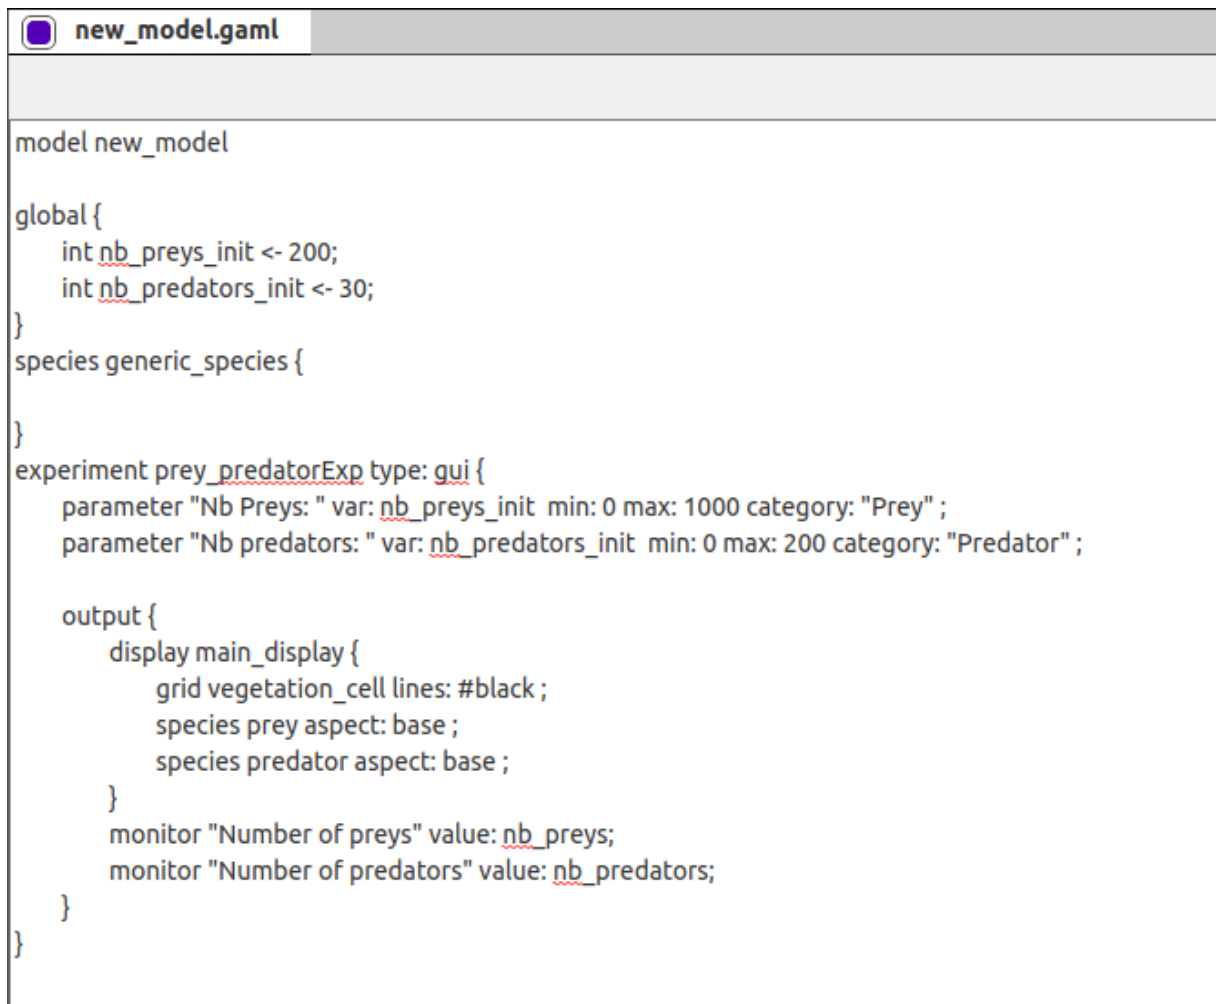

Figure 4.10. Ways to create model files

```
model new_model

global {
  int nb_preys_init <- 200;
  int nb_predators_init <- 30;
}
species generic_species {
}

experiment prey_predatorExp type: gui {
  parameter "Nb Preys: " var: nb_preys_init min: 0 max: 1000 category: "Prey";
  parameter "Nb predators: " var: nb_predators_init min: 0 max: 200 category: "Predator";

  output {
    display main_display {
      grid vegetation_cell lines: #black;
      species prey aspect: base;
      species predator aspect: base;
    }
    monitor "Number of preys" value: nb_preys;
    monitor "Number of predators" value: nb_predators;
  }
}
```

Figure 4.11 Model file editing interface

Figure 4.12 The interface changes the number of simulation steps

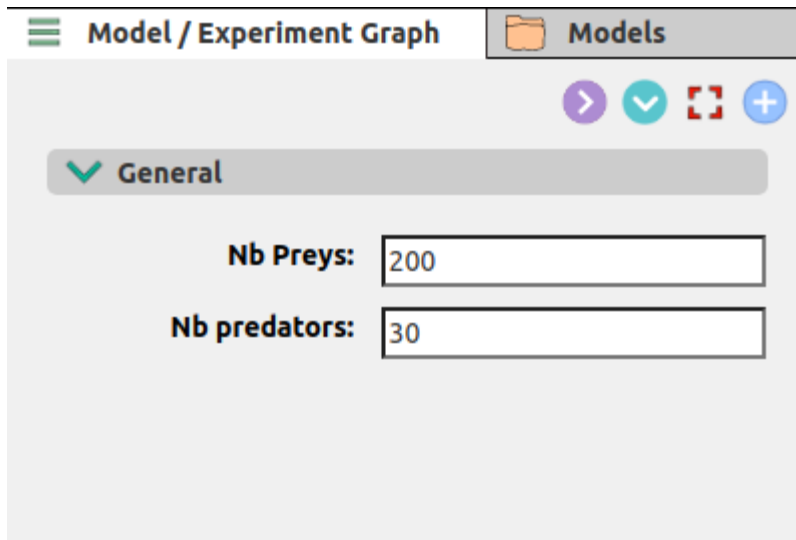

Figure 4.13. The interface changes parameter values

```
<?xml version="1.0" encoding="UTF-8"?>
<Simulation id="2" sourcePath="./predatorPrey/predatorPrey.gaml"
finalstep="1000" experiment="predPrey">
  <Parameters>
    <Parameter name="nb_predator_init" type="INT" value="53" />
    <Parameter name="nb_preys_init" type="INT" value="621" />
  </Parameters>
  <Outputs>
    <Output id="1" name="main_display" framerate="10" />
    <Output id="2" name="number_of_preys" framerate="1" />
    <Output id="3" name="number_of_predators" framerate="1" />
    <Output id="4" name="duration" framerate="1" />
  </Outputs>
</Simulation>
```

Figure 4.14. Example file with .xml extension

```
() proxy.conf.json > ...
1  [
2    "/api/**": {
3      "target": "http://localhost:8080",
4      "secure": false,
5      "logLevel": "debug",
6      "changeOrigin": true
7    }
8  ]
```
